

## QUARANTINE STUDENTS WHO HAVE BEEN IN CONTACT WITH THE SICK PERSON

- **Quarantine is necessary for students who have been in close contact with someone who already has novel coronavirus**

Quarantine means staying in your home, hotel room or provided accommodation, and not leaving for the period of time:

- You need to stay in home for 14 days from the last date of contact with the confirmed case.
- Only people who usually live in the household should be in the home.
- Do not allow visitors into the home.
- You should not attend your regular work for 14 days from the date you departed.

\*If at any time during your 14 days, you develop symptoms, you should seek medical attention immediately.

\*If you have self-quarantined for 14 days without any symptoms, you are free to go about your usual activities.
